PROFESSIONAL SUMMARY

Cloud & DevOps Engineer with 4+ years of hands-on experience designing and deploying infrastructure on AWS, Kubernetes, and Terraform. Delivered 30% cost reduction and 60% faster deployments through CI/CD automation using Jenkins/GitLab CI. Skilled in infrastructure automation, containerization, MongoDB administration, and cloud security. Proven track record managing high-availability systems across multiple cloud platforms.

CORE SKILLS

Cloud Platforms:	AWS (EC2, ECS, EKS, RDS, S3, Lambda, CloudFormation, IAM), GCP, Azure
Container & Orchestration:	Docker, Docker Compose, Kubernetes (EKS), Helm
Infrastructure as Code:	Terraform, AWS CloudFormation, Ansible
CI/CD & Automation:	GitLab CI, Jenkins, GitHub Actions, ArgoCD, SAST, Trivy, SonarQube, OWASP
Observability & Monitoring:	Prometheus, Zabbix, Grafana, Loki, AWS CloudWatch, Dynatrace
Scripting & Programming:	Linux (Ubuntu, CentOS), Python (Boto3), Bash/Shell Scripting
Databases & Tools:	MongoDB, AWS RDS, DynamoDB, PostgreSQL, Jira, Git, HashiCorp Vault

PROFESSIONAL EXPERIENCE

DevOps Engineer | Aerin IT Services | Chandigarh, India | July 2026 – Present

- Administer and optimize AWS infrastructure for high availability and security compliance with automated resource provisioning.
- Led migration of legacy Jenkins CI/CD pipelines to GitLab CI, reducing build times by 40% and centralizing pipeline management for 15+ engineering teams.
- Manage and optimize MongoDB clusters using compaction, maintenance automation, and performance tuning, improved query response times by 35%.
- Resolved technical incidents and deployment requests via Jira with 95%+ SLA compliance using Infrastructure as Code best practices.

Analyst | HCLTech | Noida, Uttar Pradesh, India | July 2023 – April 2026

- Designed high-availability AWS architectures with RDS multi-AZ and S3 cross-region replication, boosting system availability by 40% through auto-scaling and load balancing.
- Achieved 30% AWS cost reduction via automated right-sizing, spot instance migration using Terraform, and Lambda-based EBS cleanup automation.
- Eliminated configuration drift by engineering immutable infrastructure with Terraform/CloudFormation (70% reduction in manual provisioning) and built Jenkins/GitHub Actions CI/CD pipelines (60% faster deployments).
- Spearheaded monolithic-to-microservices migration using Docker and Kubernetes, enabling zero-downtime deployments with blue/green and canary strategies.
- Hardened AWS environment with IAM least privilege policies and KMS encryption, reducing attack surface by 40%.

IVR Developer (Analyst) | HCLTech | Noida, Uttar Pradesh, India | July 2022 – July 2023

- Engineered IVR systems, Outbound Dialers, and RESTful API integrations for enterprise clients with focus on high availability and production service reliability.

KEY PROJECTS & ACHIEVEMENTS

1. Automated Microservices Migration for Verizon Communications Inc.

- Migrated legacy billing services to AWS EKS using Terraform Infrastructure as Code, reducing environment setup time from days to under 20 minutes.
- Developed Jenkins CI/CD pipelines with Helm for automated Docker deployments, slashing release cycles by 80% (4 hours → 30 minutes).
- Hardened EKS worker nodes using Ansible, automating security patching and package installation to achieve 100% environment consistency.
- Executed zero-downtime Kubernetes Rolling Updates for Java/Node.js microservices, maintaining 99.99% availability throughout migration.
- Established Prometheus and Grafana monitoring stack tracking Golden Signals (latency, traffic, errors, saturation), achieving 60% faster recovery time.

2. DevSecOps Implementation for MERN Stack Application

- Designed end-to-end CI/CD pipelines using Jenkins with separated pipeline stages, reducing production rollbacks by eliminating manual deployment errors.
- Implemented continuous security testing using OWASP, SonarQube and Trivy, identified 150+ vulnerabilities proactively and reduced code smells by 40%.
- Automated Docker image lifecycle management and EKS deployment using ArgoCD with GitHub Webhooks, ensuring 100% environment consistency across all clusters.
- Required faster detection and troubleshooting of production issues, deployed Prometheus, Grafana, and Loki for metrics, dashboards, alerting, and centralized logs, enabling proactive troubleshooting and achieving 70% faster incident response.

3. GitOps Deployment & Security Governance for Python Microservices

- Architected automated GitOps delivery model using ArgoCD and EKS, replacing manual deployments and eliminating configuration drift across 5+ microservices.
- Engineered Jenkins Shared Library for microservices CI/CD with integrated SonarQube quality gates enforcing 80%+ code coverage and zero-vulnerability builds.
- Provisioned scalable infrastructure using Terraform with least-privilege access via IRSA and dynamic secret injection using AWS Secrets Manager.
- Reduced operational overhead by 70% and achieved zero production rollbacks through automated self-healing mechanisms and hardened container security policies.

CERTIFICATIONS & AWARDS

- [Cloud & DevOps Expert Program](#) | CloudThat Technologies | Nov 2024 – May 2025
- 2nd Position – Amazon Elevate Day Competition (HCLTech)
- HCL Spot Award & Xtramiles Monetary Reward – Exceptional delivery within stipulated timeframes

EDUCATION

Bachelor of Technology – Mechanical & Automation Engineering | Guru Gobind Singh Indraprastha University | 2014 – 2018 | First Division
